

Harvesting or Turning Crops Under Prior to Inspection for Hail Loss

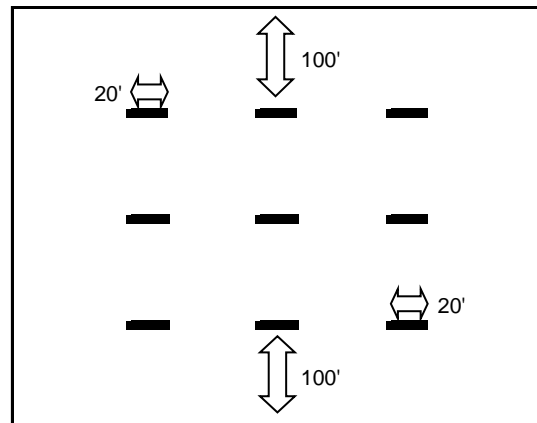

1. Where the crop is being **turned under** or **cut for feed**, leave standing a 12 foot wide strip, 100 feet in from the outside edge of the field, all the way around the field. For fields in **excess** of 80 acres, leave an additional strip down the centre of the field.
2. If the crop is **ready to swath, leave no crop standing**. Swath it all as the adjustment will be made from the swath. **Exception: Leave standing samples of peas and lentils.**
3. Where a **swathed crop is being harvested**, leave three 20 foot lengths of swath on each side of the field, 100 feet in from the outside edge of the field. For fields in **excess** of 80 acres, leave three additional 20 foot lengths of swath down the centre of the field.
4. Where the crop is being **straight combined**, the location of the evidence remains the **same** as stated for swathed crops. The size is the width of the header by 20 feet in length.
5. If a hail claim has been filed and **sufficient undisturbed evidence of the crop has not been left for inspection**, the question of liability will be decided at Head Office.

Turning under or cutting for feed

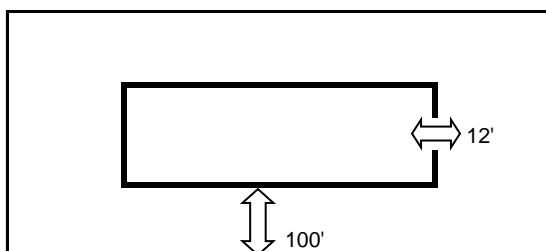

Over 80 acres

Picking up swaths or straight cutting

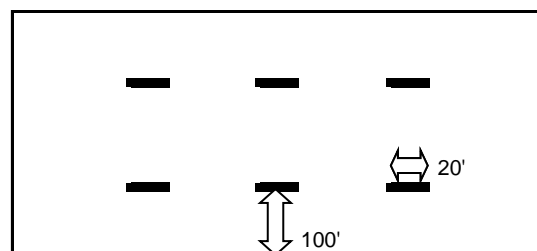

Over 80 acres

Turning under or cutting for feed
